

Key Responsibilities

- Analyse requirements and user stories to design effective **test plans** and **automation test cases**.
 - Develop, maintain, and execute **automated test scripts** using **Playwright or Selenium**.
 - Perform functional, regression, smoke, and integration testing.
 - Identify, log, and track defects using tools such as **GitLab / JIRA / Azure DevOps / Bugzilla**.
 - Collaborate with developers, product managers, QA leads, and other stakeholders to ensure timely and high-quality releases.
 - Contribute to the development of automation frameworks and utilities.
 - Perform **API testing** using tools like **Postman**, and optionally automate API tests using frameworks such as **REST Assured / Playwright API**.
 - Maintain test documentation: test cases, automation reports, execution logs.
 - Participate in Agile ceremonies (stand-ups, sprint planning, retrospectives).
 - Support CI/CD integration of automated tests using **Jenkins / GitHub Actions / GitLab CI**.
-

Required Skills & Qualifications

- Bachelor's degree in Computer Science, Engineering, IT, or related field.
 - **2–3 years of experience in automation testing (MANDATORY)**.
 - Strong hands-on experience with **Playwright or Selenium** (at least one is required; both is a plus).
 - Experience with programming languages such as **JavaScript/TypeScript, Java, or Python** (based on automation stack).
 - Good understanding of **test automation frameworks** (Page Object Model, Hybrid Framework, BDD, etc.).
 - Experience with **test runners** like Karma, Jest, Mocha or PyTest.
 - Knowledge of **CI/CD pipelines** and integrating automated tests into pipelines.
 - Ability to write and execute **SQL queries** for backend validation.
 - Strong understanding of **SDLC, STLC, QA methodologies**, and Agile processes.
 - Excellent problem-solving skills and attention to detail.
 - Good communication and documentation skills.
-

Preferred / Nice-to-Have Skills

- Experience with **Selenium, Playwright API testing**, or mobile automation (Appium).
- Knowledge of performance testing using JMeter or K6.
- Experience with containerization (Docker).
- Exposure to cloud testing platforms (BrowserStack, Sauce Labs).
