

Venkatesh Manchala

SDET | Automation Engineer

✉ venkatesh_m@yopmail.com | 📞 9098765432 | 📍 Hyderabad, India | Willing to relocate

Professional Summary

Detail-oriented Software Development Engineer in Test (SDET) with experience in building scalable automation frameworks for web, mobile, and APIs. Strong expertise in Java, JavaScript, Appium, Selenium, Playwright, REST API testing, and CI/CD pipelines. Proven ability to improve test coverage, reduce regression time, and collaborate closely with developers and product teams to ensure high-quality releases.

Experience

Software Engineer (SDET / Full Stack)

Darwinbox Digital Solutions Pvt Ltd — Hyderabad

Jan 2023 – Present

- Designed and maintained automation frameworks for web and mobile using **Java, Selenium, Appium, and Playwright**.
 - Automated end-to-end test flows including **OTP authentication, file uploads, role-based access, and integrations**.
 - Performed **API testing** using Postman and automated API validations.
 - Integrated test suites with **CI/CD pipelines (Jenkins)** to enable continuous quality checks.
 - Worked with **Docker** for containerized test execution and environment setup.
 - Contributed to **Flutter common component library** and supported mobile testing.
 - Actively collaborated with developers, QA, and product teams to identify gaps and improve testability.
-

Technical Skills

Programming Languages:

Java, JavaScript, PL/SQL

Test Automation:

Selenium WebDriver, Appium, Playwright, TestNG, JUnit

API Testing:

Postman, REST APIs, OAuth, JWT, Swagger

CI/CD & DevOps:

Jenkins, Docker, Git, GitHub, Linux

Frameworks & Tools:

Node.js, Express.js, MongoDB, Flutter, Maven

Cloud & Others:

AWS (EC2, S3 basics), Jira, Agile/Scrum

Projects

AI Interview Platform – End-to-End Automation

- Automated complete recruiter–candidate flow including login via OTP (YOPmail), interview creation, file uploads, and validation.
- Focused on **stability, dynamic waits, and reusable test design**.

Mobile Automation Framework (Appium + Flutter)

- Built modular automation structure for mobile apps with multiple feature modules.
- Implemented reusable gestures (swipe, scroll, element actions) and reporting.

Backend State Management System (Node.js + TypeScript)

- Developed authentication, CRUD APIs, validation, and Dockerized setup.
 - Documented APIs using Postman and followed clean architecture principles.
-

Education

Bachelor's Degree in Engineering (B.Tech)

(Details can be added if you want)

Additional Information

- Available for Face-to-Face interviews on weekends
- Strong interest in **test architecture, scalability, and quality engineering**
- Actively preparing for product-based SDET roles
